APPENDIX C INCINERATOR DETAILED DATA LISTING

All information extracted from the certificate of compliance (COC) test reports is provided in Sections 1 through 8. Each section provides a particular type of information. The information within each section is grouped by the specific device tested. To help the reader navigate through the data, two look up tables have been provided (see Tables 1 and 2). Table 1 provides a list of relevant information for each emitting process. An emitting process is a collection of combustion devices which emit to a common stack or collection of stacks. For example, a facility may have two devices whose emissions are combined and exhausted through a common stack. This would be classified as a single emitting process. However, if each device had its own stack, each device would be considered as a separate emitting process. Table 2 provides a list of emitting processes in each section. Table 1 can be used to quickly locate all information for a particular emitting process while Table 2 can be used to locate emitting processes within a section. The information provided in each section is described below.

Section 1 - Company and Test Location Summary. This section includes the name and location of each emitting process in the database. The emitting processes are sorted by 1.Company, 2.City, 3.State, and 4.Emitting Process ID. It should be noted that sort field 1 is only printed when it changes. Sort fields 2, 3 and 4 are printed for every record. Table 3 describes each field in this section. A list of terms is provided in Table 4.

Section 2 - Emitting Process Summary Information and Test Conditions. This section includes basic information for each emitting process such as the types of waste and fuels burned as well as the unit capacity. The test report and certificate of compliance dates also are provided were applicable. It should be noted that the most current dates are listed. For example if an emitting process was tested on 1/92 and 1/95, the test date would be 1/95. A brief description of each test conducted on the emitting process also is provided. The information is sorted by 1.Company, 2.State, 3.City, 4.Emitting Process ID, and 5.EER Run ID. The EER Run ID includes the emitting process ID, condition number, and run number. It should be noted that the sort fields 1, 2, and 3 are only printed when they can change. Sort fields 4 and 5 are printed for every record. Table 3 describes each field in this section. A list of terms is provided in Table 4.

Section 3 - Combustor Design and Operating Information. This section includes detailed chamber specific information on the combustor design and operation for each emitting process. The information is sorted by 1.Company, 2.State, 3.City, 4.Emitting Process ID, 5.Combustor Type, and 6.EER Run ID. It should be noted that the sort fields 1, 2, 3, 4, and 5 are only printed when they can change. Sort field 6 is printed for every record. Table 3 describes each field in this section. A list of terms is provided in Table 4.

Section 4 - APC Device Design and Operating Information. This section includes detailed APC device specific information on APC device design and operation for each emitting process. The information is sorted by 1.Company, 2.State, 3.City, 4.Emitting Process ID, 5.APC System Type, and 6.EER Run ID. It should be noted that the sort fields 1,

2, 3, 4, and 5 are only printed when they can change. Sort field 6 is printed for every record. Section 4 is divided into several subsections including:

- 4a - Electrostatic Precipitator Design and Operating Information.
- 4b - Fabric Filter Design and Operating Information.
- 4c - Quench Design and Operating Information.
- 4d - Venturi Scrubber Design and Operating Information.
- 4e - Scrubber Design and Operating Information.
- 4f - Other Control Design and Operating Information.

Tables 1 can be used to quickly locate information for a specific facility. Table 3 describes each field in this section. A list of terms is provided in Table 4.

Section 5 - Emission Stream Rates. This section includes basic source test information at the controlled and uncontrolled air emission sampling locations. The information is sorted by 1.Company, 2.State, 3.City, 4.Emitting Process ID, 5.Stream Type (Controlled or Uncontrolled), 6.Stream Description (Emissions), and 7.EER Run ID. It should be noted that sort fields 5 and 6 are only printed when they can change. Sort fields 1, 2, 3, and 4 are listed at the top of each page. Sort field 7 is printed for every record. Table 3 describes each field in this section. A list of terms is provided in Table 4.

Section 6 - Other Stream Rates. This section includes basic information for each process stream where available. Example process streams include spikes, waste, fuel, raw materials, collected ash, and product. The information is sorted by 1.Company, 2.State, 3.City, 4.Emitting Process ID, 5.Stream Type (Fuel , Waste, Raw Material, Spike, Fabric Filter Ash, Clinker, Aggregate, Electrostatic Precipitator Ash, etc.), 6.Stream Description (various descriptions given), and 7.EER Run ID. It should be noted that sort fields 5 and 6 are only printed when they can change. Sort fields 1, 2, 3, and 4 are listed at the top of each page. Sort field 7 is printed for every record. Table 3 describes each field in this section. A list of terms is provided in Table 4.

Section 7 - Emissions Analyses. This section includes trace metals (Arsenic, Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Mercury, Selenium, Silver, Thallium), particulate, HCl/Cl₂, Hydrocarbon (THC), carbon monoxide (CO), semi-volatile organic compounds (SVOC), volatile organic compounds (VOC), and dioxin/furan analyses for controlled and uncontrolled air emissions. Zero indicates no data was available. Units include lbs/hr for all mass flow rates. Concentration units depend on the stream type and substance category. Concentrations are provided in ppmv for HCl/Cl₂/CO/THC, ug/dscm for metals, gr/dscf for particulate, and ng/dscm for SVOC, VOC and dioxin/furans. Where possible, the air emission concentrations have been corrected to 7% oxygen. In some cases, the oxygen content of the stack gases was not provided. The information is sorted by 1.Company, 2.State, 3.City, 4.Emitting Process ID, 5.Stream Type (Controlled or Uncontrolled), 6.Stream Description (Emissions), 7.Category (Chlorine, Dioxin & Furan, Metals, Particulate, SVOC, THC & CO, and VOC), 8.Substance (various), and 9.EER Run ID. It should be noted that sort fields 5,

6, and 7 are only printed when they can change. Sort fields 1, 2, 3, and 4 are listed at the top of each page. Sort fields 8 and 9 are printed for every record. Table 3 describes each field in this section. A list of terms is provided in Table 4.

Section 8 - Other Stream Analyses. This section includes trace metals (Arsenic, Antimony, Barium, Beryllium, Cadmium, Chromium, Lead, Nickel, Mercury, Selenium, Silver, Thallium), particulate, HCl/Cl₂, semi-volatile organic compounds (SVOC), volatile organic compounds (VOC), and dioxin/furan analyses for process streams. Zero indicates no data was available. Units include lbs/hr for all mass flow rates. Concentration units for most substances are ug/g. The information is sorted by 1.Company, 2.State, 3.City, 4.Emitting Process ID, 5.Stream Type (Fuel , Waste, Raw Material, Spike, Fabric Filter Ash, Clinker, Aggregate, and Electrostatic Precipitator Ash), 6.Stream Description (various), 7.Category (Chlorine, Dioxin & Furan, Metals, Particulate, SVOC, THC & CO, and VOC), 8.Substance (various), and 9.EER Run ID. It should be noted that sort fields 5, 6, and 7 are only printed when they can change. Sort fields 1, 2, 3, and 4 are listed at the top of each page. Sort fields 8 and 9 are printed for every record. Table 3 describes each field in this section. A list of terms is provided in Table 4.
